

Senior frontend engineer with 5+ years building consumer-facing web and mobile experiences at scale — most recently shipping high-stakes onboarding and credit card flows at **Gemini** used by ~587K monthly transacting users. Specializes in **React**, **React Native**, and **TypeScript** with deep ownership of design systems, experimentation infrastructure, and release engineering. Bridges product, design, and backend with a calm, measured eye toward performance, accessibility, and long-term maintainability.

EXPERIENCE

Gemini · Senior Frontend Engineer (Web & Mobile)

Dec 2024 – Feb 2026 · San Francisco, CA

Cryptocurrency exchange and financial platform serving retail and institutional clients across trading, credit card, and digital asset products.

- Owned the credit card application funnel for retail and business products (~587K MTUs, 17% YoY platform growth) — pre-qualification, identity verification, approval, activation, and rewards selection across React (web) and React Native (Expo) — measurably lifting application-completion conversion and cutting drop-off at identity verification.
- Architected multi-step onboarding workflows in TypeScript spanning OpenAPI-driven REST integrations, Onfido KYC, eligibility gating, defensive error handling, and feature-flagged rollouts — supporting two consumer credit card launches and the Predictions market application.
- Co-led the team's experimentation framework — wired Mixpanel funnel instrumentation, A/B test scaffolding, and referral promotion entry points used by product to ship 12+ experiments and convert qualitative hypotheses into shipped features.
- Cut CI runtime ~25% and raised release confidence via comprehensive Jest unit tests, Playwright smoke audits, and parallelization of the test pipeline — reducing average PR-to-deploy time and on-call regressions.
- Drove team velocity ~20–25% through adoption of AI-assisted workflows (Claude Code, MCP tooling) and led the migration from Jira to Linear — onboarding peers and codifying conventions.
- Mentored junior and mid engineers through pairing, design review, and structured code review across web and mobile — partnered with design and product to translate Figma into accessible, performant interfaces against a shared design system.

Upstart · Software Engineer

May 2021 – Mar 2023 · San Mateo, CA

AI lending platform partnering with banks and credit unions to provide consumer loans using non-traditional variables.

- Led the customizable-loan initiative end-to-end with product and design — driving an 8% increase in customer conversion within 3 months of launch.
- Migrated high-traffic product surfaces to Next.js SSR — cut load time by 40% and lifted Lighthouse scores above 90 across the loan funnel.
- Built and maintained the React + TypeScript component library powering applications used by 3M+ customers, integrated against Ruby on Rails services.
- Drove reliability via 90%+ test coverage (Jest, RSpec, Playwright) and full WCAG 2.1 AA accessibility compliance across regulated financial workflows.
- Held production health below 8% incident rate through proactive monitoring (Datadog, SumoLogic, Bugsnag) and disciplined triage during on-call rotations.

Tonight · Software Engineer

Jul 2020 – Feb 2021 · San Francisco, CA

Mobile and web app surfacing local nightlife venues and events.

- Led the frontend team of 3 — facilitated daily standups, established React conventions, and shaped UI/UX direction for the application.
- Built the React web client and Swift / React Native mobile experiences focused on low-friction discovery flows for nightlife venues and events.
- Designed RESTful Node.js + Express APIs backed by MongoDB, powering the data layer between the database and frontend modules.

SELECTED PROJECTS

Dynamic Portfolio · [jfernportfolio.vercel.app](#) — Custom Next.js 14 + Tailwind site with hand-rolled design system, scroll-driven Framer Motion reveals, drag-paginated project carousel, monochrome-to-color skill tiles via CSS masks, and a duotone tech-poster Hero. Open source on [github.com/Justinlf55/DynamicPortfolio](#).

Monster Mayhem — Real-time multiplayer browser arena with WebSocket-driven match servers (React/Redux + Express/MongoDB). Frontend lead.

Newflix — Netflix-inspired streaming experience (auth-gated browse, S3-backed media; React/Redux + Rails/PostgreSQL).

SKILLS

Frontend	React · React Native (Expo) · Next.js (App Router, RSC, Streaming SSR) · TypeScript · JavaScript · Tailwind CSS · Framer Motion · React Query · React Hook Form · Redux Toolkit
Architecture	Design Systems · Component APIs · Accessibility (WCAG 2.1 AA) · Bundle Analysis · Core Web Vitals · A/B Testing · Feature Flags
Testing	Jest · React Testing Library · Playwright (E2E + smoke) · RSpec · TDD
Backend	Node.js · Express · REST · OpenAPI · Ruby on Rails · PostgreSQL · MongoDB
Platform	AWS · Vercel · GitHub Actions (CI/CD) · Datadog · Mixpanel · Linear · Figma · Claude Code · MCP

EDUCATION

App Academy · Full-stack software development bootcamp (Oct 2019 – Mar 2020) · **University of California, Irvine** · B.S. Biology (Sep 2013 – Jun 2017)
